TODAY'S KEY COMMUNITY PREVENTION MESSAGING:

The Badger Bounce Back: Wisconsin's Plan to Get Moving Again

[Badger Bounce Back](#) is Wisconsin's plan to decrease COVID-19 cases and deaths to a low level and increase capacity in our healthcare system so that a phased reopening of businesses is possible. And that means people can get back to work. In order to turn the dial on Safer at Home, we need to increase lab capacity and testing; increase contact tracing and support for isolation and quarantine; track the spread of COVID-19; increase health care capacity; and procure more personal protective equipment. Decisions to move from phase to phase are guided by data, which allows us to re-open while preventing a second wave of COVID-19.

The Badger Bounce Back plan includes [gating criteria \(metrics and data\)](#) that we will use to determine when we can begin to allow people to interact and, more importantly, get Wisconsinites back to work.

[Safer at Home](#) has saved lives, protected health care workers and critical employees, and prevented hospitals from being overrun, but it is not a workable solution for our economy or our way of life in the long-term. The Badger Bounce Back moves from boxing in Wisconsinites to boxing in COVID-19.

Health System Updates:

- HSHS St. Nicholas Hospital reminds all community members that the Emergency Department (as well as the hospital) is open and available to provide all types of emergency medical care, 24/7. Seeking care for medical emergencies, such as chest pain, stroke symptoms, injuries and more,

SHEBOYGAN COUNTY

should never be forgone or delayed – even in the midst of a pandemic. The hospital is well-prepared to provide all types of emergency care and has carefully-designed protocols in place to prevent the spread of all infectious diseases, including COVID-19, to patients and colleagues. HSHS St. Nicholas Hospital and Prevea Health are starting to perform elective procedures.

- Aurora Sheboygan Memorial Medical Center’s Emergency Department is open and available to provide all types of emergency medical care. We encourage patients to seek care for medical emergencies such as chest pain, heart attack, stroke symptoms, injuries and more, and should not delay care during the pandemic. We are well-equipped and taking proactive measures to prevent the spread of all infectious diseases, including COVID-19.
