Case Updates and Monitoring:

Wisconsin State Cases:

- Information on most up to date case counts statewide can be found [here](#).

****Sheboygan Case Updates:**

- Sheboygan County currently has 64 confirmed cases of COVID-19. Of those, 45 cases have recovered and are no longer ill. Of the active cases, 2 are currently hospitalized.
- Active cases** are defined as those individuals who are currently ill and requiring medical care or are in isolation.
- Recovered cases** are defined as confirmed cases where at least 3 days/72 hours have passed since recovery, defined as resolution of fever without the use of fever-reducing medications and improvement in respiratory symptoms, **AND** at least 7 days have passed since symptoms first appeared.
- Negative Tests** are defined as a COVID-19 test with a negative result that was reported to Public Health. For information on testing, see WI testing priorities and procedures section.

- Sheboygan Case Counts
- Key Community Prevention Messaging
- Press Releases-- State Reporting on Investigations

Updated information is denoted by a ** prior to the bullet in the report below

TODAY'S KEY COMMUNITY PREVENTION MESSAGING:

You are not alone. We are in this together. [Do not hesitate to ask for help if you're feeling overwhelmed.](#)

The Badger Bounce Back: Wisconsin's Plan to Get Moving Again

- The Badger Bounce Back plan includes [gating criteria \(metrics and data\)](#) that we will use to determine when we can begin to allow people to interact and, more importantly, get Wisconsinites back to work.
- [Wisconsin is working to be one of the top states in testing per capita](#), in addition to already being one of the top states in COVID-19 testing capacity. To so, the Badger Bounce Back Plan has four key testing goals:
 - Respond to every employer, corrections, and congregate care outbreak
 - Test every nursing home resident and staff member
 - Establish community testing programs for symptomatic individuals in target communities
 - Ensure everyone who is experiencing COVID-19 symptoms gets a test
- We are also scaling up our contact tracing program to match our expanding COVID-19 testing.
 - Contact tracing allows public health to track the spread of COVID-19 and break the chain of disease spread. It's done by contacting those who have tested positive, learning who they've had recent contact with and then contacting those individuals to provide guidance on testing and isolation.
 - As we increase testing to 85,000 a week, we're expecting a big increase in the number of contact interviews per week, and we're scaling up to meet that demand as well as deal with potential surges from local outbreaks.
 - Under the Badger Bounce Back plan, the goal is to interview positive cases within 24 hours of diagnosis, and contacts within another 24 hours. Staying home when one tests positive or is exposed to someone who is infected with COVID-19 will be critical to stopping the spread of the disease as we continue to turn the dial and further reopen the state.
- To turn the dial in Wisconsin, we have to test everyone with symptoms. From there, we move to contact tracing and getting those exposed to the virus in quarantine.

Health System Updates:

- HSHS St. Nicholas Hospital reminds all community members that the Emergency Department (as well as the hospital) is open and available to provide all types of emergency medical care, 24/7. Seeking care for medical emergencies, such as chest pain, stroke symptoms, injuries and more, should never be forgone or delayed – even in the midst of a pandemic. The hospital is well-prepared to provide all types of emergency care and has carefully-designed protocols in place to prevent the spread of all infectious diseases, including COVID-19, to patients and colleagues. HSHS St. Nicholas Hospital and Prevea Health are starting to perform elective procedures.
- Aurora Sheboygan Memorial Medical Center's Emergency Department is open and available to provide all types of emergency medical care. We encourage patients to seek care for medical emergencies such as chest pain, heart attack, stroke symptoms, injuries and more, and should not delay care during the pandemic. We are well-equipped and taking proactive measures to prevent the spread of all infectious diseases, including COVID-19.
